

# Storage Tanks

Capacities from  
3000 – 30000 Litres

The storage tanks for our Helicopter Refuelling systems will be mounted in a skid together with a pump unit. Dual and twin chamber tanks gives a high flexibility in the system as there will always be one tank ready for filling while the other tank is being filled, under settling or inspection.

The storage tanks can be delivered with single or twin chambers in stainless steel or duplex. The Storage Tanks will be piped up to the pump unit through hard piping and remote controlled valves for easy system control.
