

Cathodic Protection Live Monitoring

Acoustic Telemetry

- Deck Box**
- Receive CP data
 - Download log files
 - Network connection to ops dashboard
 - Cloud data access

Receiver Transducer

CP Beacon

- Zn + Ag/AgCl inputs
- Configurable broadcast interval
- > 5 year battery life

With an extensive track record of acoustic communication, Imenco provides long term wireless live monitoring of level of protection of installed Cathodic Protection (CP).

- Proven acoustic monitoring.
- Long range communication with multiple remote assets.
- Alternative to drop cells or periodic diver/ROV surveys.
- Battery life > 5 years.

Cathodic Protection Live Monitoring

Gain reliable, repeatable measurements of CP distributed protection across structures, mooring lines and pipelines without the need for drop cells, divers or ROV inspection.

Capture measurements frequently during or post installation, or as required over long term. Quickly compare levels of protection across multiple locations.

Observe CP changes as early as possible, economically plan for inspection, maintenance and remedial actions.
